Just click the Availability & Price Login link on the DeVilbiss Automotive Refinishing homepage to enter your username and password or request an account. Once your information is verified, an account will be created and you will be given credentials to view suggested pricing. **Please contact Customer Service for more information at askus@devilbissar.com.**

Solvent Saver™ Saves The Day!

Pressure feed guns are great for painting large items or large quantities of items, but cleaning the spray system is often a dreaded chore. Thankfully, Solvent Saver™ comes to the rescue! The DeVilbiss Solvent Saver™ allows a painter to quickly clean the entire spray system while using very little solvent. A spray system can typically be cleaned in less than five minutes with about 5 fluid ounces of solvent using the DeVilbiss Solvent Saver™.

The Solvent Saver™ easily connects to the pickup tube of the pressure pot by hand tightening a specially designed compression fitting. The fluid hose and gun remain connected to the pressure pot lid. The painter then opens a valve on the two quart Solvent Saver™ which allows a pressurized pulsating solvent and air mixture to flow back through the entire system when the gun is triggered. The painter simply keeps the gun triggered until the solvent being sprayed out is completely clean and then shuts the valve on the Solvent Saver™.

After cleaning, the Solvent Saver™ compression fitting is removed from the pressure pot lid. Air can then be blown back through the pickup tube to blow the remaining solvent from the spray system. The spray system is then ready for the next paint job.

Disassembly of the spray gun is essentially not required if the spray system is cleaned and blown out immediately after spraying by using the DeVilbiss Solvent Saver™. This saves the painter a considerable amount of valuable time.

Please go to
www.autorefinishdevilbiss.com
for more information about the
Solvent Saver™.

Learn About Crash Avoidance Features By Make & Model

Crash avoidance features are rapidly making their way into the vehicle fleet. Six of the most common new technologies are forward collision warning, autobrake, lane departure warning, lane departure prevention, adaptive headlights and blind spot detection.

This website allows you to search crash avoidance features by make and model : www.iihs.org/iihs/ratings/crash-avoidance-features and see crash avoidance technology in action.
